Innbox Premium Application Suite
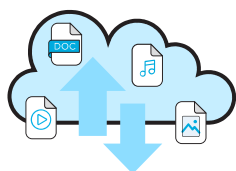

Let Innbox take you beyond the box

Operators continuously strive to meet their goals when introducing customer-premises equipment. In addition to keeping costs under control and generating revenue, they need to promote their brand recognition by making user experience match their corporate identity and public image.

Building upon extensive experience, S&T Iskratel understands these specific – yet various – needs. With a premium suite of applications for Iskratel Innbox home gateways, S&T Iskratel arms the operators to deliver superior user experience.

Many customers are willing to pay more for top-of-the-line services. Your ability to offer over-the-top services with the Innbox Premium Application Suite will distinguish you from competitors, help you maintain a good, long-lasting relation with your customers and – above all – increase your revenues.

The applications are designed for easy remote management and troubleshooting.

## What's inside the suite?

Innbox Share

Innbox Advanced Parental Control

Innbox MeetInn
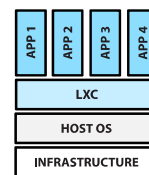

Innbox VPN

Innbox IPTV over Wi-Fi

Innbox Speedtest® by Ookla®

Innbox Dashboard

Innbox Mobile App

LXC Containerisation

Innbox Share

Innbox Share is a private cloud storage with users' personal files securely stored on the storage unit attached to the Innbox home gateway. Sharing files to friends and family, viewing images, streaming videos or collaboration on documents is possible across all connected devices.

Innbox MeetInn

Organising online meetings, conferences or presentations is managed with Innbox MeetInn. The conferencing platform offers complete privacy, allows users to share files, chat and invite participants to join via link or email.

Innbox IPTV over Wi-Fi

No more network cables from the set-top-box and around the home: Innbox IPTV over Wi-Fi converts video streams from UDP to TCP (with retransmission if necessary) to ensure cable-free, high-quality video streaming over Wi-Fi or Mesh Wi-Fi.

Innbox Dashboard

Innbox Dashboard is an advanced, upgraded GUI for simple control, management and monitoring of Innbox home gateways and applications. It gives a graphical overview of link rates and the volume of data transmitted and received (for various periods of time) for the home gateway and all connected devices. The dashboard's network map displays a real-time view of connected clients and network performance.

Innbox Advanced Parental Control

Innbox Advanced Parental Control offers parents a variety of levels of control over children's internet use. In addition to limiting web access with *Content Filtering*, *Time Out* and *Screen Time*, the application raises awareness about safe internet use with the help of *Educational Pop-Up Cards*.

Innbox VPN

With Innbox VPN (Virtual Private Network), users can securely connect to their home network from anywhere in the world, and access all their home services and devices (such as TV sets, cameras and IoT devices).

Innbox Speedtest® by Ookla®

Innbox Speedtest® by Ookla® is the ultimate way to test the speed of internet connection. Download and upload speed tests performed on the CPE are incomparably more reliable than speed tests on connected clients (such as PCs or smartphones).

Innbox Mobile App

In addition to the GUI, home gateways come with an Innbox Mobile App. A graphic-oriented tool is available for Android and iOS. It allows user-friendly management, control of applications, diagnostics and troubleshooting.

LXC Containerisation

LXC Containerisation allows the development and deployment of independent applications on Innbox CPE without the need for a software upgrade. This lets operators benefit from integrating their own (or 3rd-party) applications to the CPE.

Availability and ordering

The Innbox Premium Application Suite is available on the latest generation of E-series, G-series and U-series of Innbox home gateways. The Suite is a bundle: individual applications cannot be purchased separately. It can be procured on a yearly basis or as a one-time buy.

The applications in the Suite can be managed remotely by the operator using the TR-069 protocol. Along with the Suite, full support, regular updates and all future applications are provided.

For more information, reach out to your S&T Iskratel representative or contact info@snt-iskratel.si.
