## A different fiscal approach

As Canadians continue to face the COVID-19 pandemic, there's no question that our economic recovery will be a challenge. Extraordinary measures have been taken to stimulate the economy, and significant – although not always in our view sufficient – supports have been provided to Canadians in the face of this pandemic. With Canada now entering a fourth wave, the need to provide economic stimulus and increased supports to Canadians and to businesses has not gone away. Recent findings from Statistics Canada show that the economy contracted in the second quarter of 2021. There is a continued need to stimulate the economy and support people through the pandemic until the economic recovery is solidified.

The pandemic has also exposed countless cracks which already existed in Canada's social safety net. The new challenge of the pandemic is made worse by the choices made by successive Liberal and Conservative governments over many years to underfund vital services and to put the wealthiest individuals and corporations first.

New Democrats propose to make very different choices. First, a choice to continue stimulating our economy in the face of a fourth wave; and second, a choice to increase revenue from those who can most afford it – revenue which will help improve the long-term sustainability of our fiscal situation and build a more equal and fairer Canada.

Substantial investments would be made to temporarily improve and extend emergency benefits which support workers and businesses as well as in measures aimed at vaccinating more Canadians. These, along with a significant financial commitment to right historical wrongs by ending the Liberal government's appeal of Human Rights Tribunal rulings regarding First Nations Child Welfare, represent one-time and time-limited funding rather than being structural.

These would be complimented by investments, including in housing and clean infrastructure, to help stimulate the economy and better position us for a strong economic recovery. Lastly, investments in a number of key areas, including in universal pharmacare and child care systems, will not only help build a fairer Canada, they will also help boost our economy in the long-term.

These measures would be offset by an increase in revenue from those at the top, as well as by a temporary tax on those who have made excessive profits during the pandemic – a revenue measure identified in the IMF's April Fiscal Monitor. Such progressive taxation measures would strengthen Canada's long-term fiscal positioning and help build a fairer country.

<b>Platform Fiscal Projection (\$M)</b>	<b>2021-22</b>	<b>2022-23</b>	<b>2023-24</b>	<b>2024-25</b>	<b>2025-26</b>
New Revenue	32,965	30,686	33,046	34,324	35,306
New Investments	40,005	41,536	43,886	44,247	44,784
Incremental Deficit/Surplus	-7,040	-10,850	-10,840	-9,923	-9,478
PBO baseline fiscal projection	-138,200	-42,700	-35,600	-24,800	-24,600
Platform fiscal projection	-145,240	-53,550	-46,440	-34,723	-34,078
New Debt to GDP Ratio	48.0%	46.9%	46.8%	47.2%	45.8%

## Fiscal sustainability and economic competitiveness

Our fiscal plans are based on the Parliamentary Budget Office's baseline. This baseline incorporates Budget 2021 measures as well as measures announced after the budget, up to and including July 30, 2021. New investments and revenue measures outlined by the New Democratic Party's *Ready for Better* plan are placed atop this base.

By raising revenue alongside investing in priority areas, our fiscal approach would not significantly impact Canada's projected debt-to-GDP ratio, meaning our long-run finances would remain fiscally sustainable. Additionally, an annual sustainability analysis will take place and would lead to potential fiscal adjustments if necessary, in order to maintain long-term sustainability.

New Democrats would manage debt and deficits responsibly, running deficits when required to rebuild and defend the services that Canadians and their families rely on, and moving to balance when it is prudent to do so.

The OECD has noted that strong social programs and public health care give a country's businesses and industries a competitive advantage. The measures we are putting forth would help stimulate the Canadian economy and build that competitive advantage through a healthier and more productive workforce. Revenue from modest increases in tax instruments such as the Corporate Income Tax will be reinvested in important measures. For example, a universal pharmacare program would save businesses money and help them attract and retain qualified workers. Similarly, business leaders such as the Canada Business Council have affirmed that child care is a vital part of social infrastructure, boosting labour force participation, providing direct employment and income, and leading to better lifelong outcomes for children who enroll.

Our ambitious plan will be a significant help to other levels of government who are facing a looming fiscal crisis. The federal government is best positioned to address this challenge. Canada has a long history of federal-provincial-territorial cooperation in overcoming challenges and delivering the results that Canadians expect – whether that be for infrastructure projects (like railways and the Trans-Canada highway) or for social programs (like universal Medicare, a public pension plan, and Employment Insurance). New Democrats will build on these successes, and will proceed within a framework of respectful asymmetrical federalism to deliver important programs such as pharmacare and child care for Canadians. Over the course of the full mandate, our investments in health care will total approximately \$68 billion, representing a significant increase in federal contributions to Canada's healthcare system.

Canada's long-term economic recovery will also depend on adapting to the global shift towards a low-carbon economy. Our plan recognizes that putting a price on carbon has been an important tool in efforts to drive emissions reductions. New Democrats will continue with carbon pricing, with the price on carbon pollution currently scheduled to increase to \$170 per tonne by 2030. We also recognize that carbon pricing won't be enough to tackle the climate crisis. Further investments are needed to meet our targets, to help people cut their emissions, and to create jobs for workers impacted by these changes. Our plan includes \$26 billion to fight climate change, protect our environment, and support workers in transition. This is in addition to converting the Canada Infrastructure Bank, which is investing \$35 billion in projects, into a Climate Bank whose mandate is to boost investment in renewable energy, energy efficiency and low-carbon technology. Such measures will help diversify our economy and build a sustained economic recovery. Significant investments in climate adaptation and disaster mitigation will also protect businesses and local economies which otherwise face catastrophic situations.

<b>New Revenue Measures (\$M)</b>	<b>2021-22</b>	<b>2022-23</b>	<b>2023-24</b>	<b>2024-25</b>	<b>2025-26</b>

## Managing risk

The investments made as part of this plan would help put Canada's fiscal position on a strong footing – all while still maintaining a sustainable debt-to-GDP ratio over the medium- and long-term. New Democrats are proud to put the interests of everyday people at the centre of our fiscal decisions. We firmly reject the idea that we can cut our way out of challenging economic circumstances.

Our plan raises important new revenues from fair and progressive sources, including a Wealth Tax on wealth over \$10 million and a tax on excessive profits that were generated during the pandemic, while so many Canadians struggled. This is the most efficient path to reducing wealth inequality in Canada. While the Parliamentary Budget Officer's estimates of these new revenue measures builds in a certain amount of behavioural response, we recognize that precise revenue projections can be challenging.

We will manage this and other unforeseen risks every year by setting aside the equivalent of 15% of new revenue, to be divided between a Forecast Allowance and a Contingency Fund. The Forecast Allowance will be based upon 10% of new revenue, and will be used to draw down revenue and protect against the possibility of lower-than-anticipated revenue. The Contingency Fund will account for 5% of new revenue, and will be set aside as an expense to manage the possibility of expenses related to COVID or other unforeseen factors.

We would also introduce new tax integrity measures, including new investments in CRA enforcement to combat international and corporate tax evasion and avoidance. This would boost the integrity of the tax system and make tax measures such as those we are proposing more effective.

Under our plan, the debt-to-GDP ratio would decline – starting at 48% and falling to 45.8% over the course of the mandate. This represents a smaller debt-to-GDP figure than was forecast in Budget 2021 for the fiscal year of 2025/26.

**As New Democrats, we are proud to have a fiscal plan that will jump-start rebuilding, while making life easier for ordinary people and building a brighter future for our children. Jagmeet and the New Democrat team are ready to make the richest pay their fair share towards the recovery, while delivering the help that people need now.**

**We know that Canadians pull together and help each other during tough times – it's who we are. Now it's time for the government to do the same – and our fiscal choice reflect these priorities.**
